Welcome to Machine Learning for Trading (CS7646)

This course is designed to give you the skills and knowledge needed to implement machine learning algorithms effectively in the trading sector. You'll learn to develop algorithmic trading strategies using advanced machine learning models. Throughout the course, we will cover a variety of techniques in Supervised Learning—including linear regression, K-Nearest Neighbors (KNN), regression trees, and ensemble learners—and in Reinforcement Learning, focusing on Q-Learning. You'll apply these methods directly to real stock market data, making informed trading decisions.

But this course is about more than just coding. It takes a comprehensive approach to applied machine learning, incorporating lessons on machine learning theory, financial market analysis, trading strategy development, and academic research writing. Each element of the curriculum is designed to build a thorough understanding of both the theoretical and practical applications of machine learning in trading, preparing you for future academic and professional challenges.

In the ML4T course, students will develop a simulated trading system through iterative projects, culminating in a capstone project that integrates machine learning and algorithmic trading strategies to model the complexity of financial markets. For more details, visit the [project overview page](https://gatech.instructure.com/courses/498126/pages/machine-learning-for-trading-project) (<https://gatech.instructure.com/courses/498126/pages/machine-learning-for-trading-project>).

Get ready to dive deep into both the technological and financial aspects of trading as you develop the skills to innovate and navigate in this dynamic field!

Understanding Our Course Policies

Our policies play a crucial role in setting the expectations and standards that will guide our interactions and your participation throughout the semester. These guidelines are designed to ensure a fair, respectful, and enriching learning environment for everyone involved. From communication and submission protocols to academic integrity and professional conduct, each policy helps streamline our processes and provides clarity on what is expected of you as a student. We strongly encourage you to review these policies thoroughly to understand your responsibilities and the resources available to you. This will not only help you navigate the course more effectively but also enhance your overall learning experience.

Please take a moment to familiarize yourself with the [detailed course policies here](https://gatech.instructure.com/courses/498126/pages/course-policies) (<https://gatech.instructure.com/courses/498126/pages/course-policies>).

Exploring Our Textbooks and Learning Resources

Our curriculum carefully integrates video content, required readings, and supplemental books to provide a comprehensive understanding of key concepts. The textbooks and other materials have been thoughtfully chosen to ensure you are engaging with the most insightful content available. While we have specified certain essential readings, such as 'What Hedge Funds Really Do', which is a concise yet informative resource that can be comfortably read in an evening or two, not all materials require cover-to-cover reading. Additionally, all required and supplemental texts are freely accessible online, ensuring you have ready access to these valuable educational tools.

For a detailed list of all the textbooks, including required and supplemental readings, please visit our [Video Lessons, Textbooks, and Other Resources](https://gatech.instructure.com/courses/498126/pages/video-lessons-textbooks-and-other-resources) (<https://gatech.instructure.com/courses/498126/pages/video-lessons-textbooks-and-other-resources>) page.

Course Logistics

All the tools you need for this course are conveniently located online. Let's walk through where everything is and how to get there:

- **Canvas:** This is your main hub. For any course content—whether it's videos, readings, or slides—log into Canvas, click on our course, and look for the 'Start Here' section. This will be your roadmap for the course.
- **Report Submissions:** When it's time to turn in reports, you'll use Canvas. Just go to the Assignments section in our course and submit your work. This will be the repository for all your hard work in report form. Feedback will be provided in Canvas.
- **Code Submissions:** Ready to submit your code? You'll do this through Gradescope. Find the link to Gradescope in our course on Canvas, where you can submit your code. Feedback will be provided through Canvas. Please do not submit code to Canvas.
- **Discussions:** For questions, clarifications, and engaging with your classmates, we'll use Ed Discussion. Access this directly through our course page on Canvas.

Remember, staying organized and keeping track of due dates is key to your success in this course. If you have any questions about the logistics or need help finding something, please reach out to the ML4T Instructional Staff on Ed Discussions.

Setting Up Your ML4T Development Environment

Properly setting up your development environment is crucial for success in this course. We use Python in a Linux or macOS environment, and specific versions of NumPy, SciPy, and Pandas. Detailed setup instructions and video tutorials are available on the ML4T Development Environment Page in Canvas. These resources will guide you to ensure your environment aligns with our grading system on Gradescope, where compatibility is paramount.

Please follow the instructions closely to avoid common pitfalls and ensure your work is evaluated correctly. Visit the [ML4T Development Environment Page](https://gatech.instructure.com/courses/498126/pages/ml4t-development-environment-setup) (<https://gatech.instructure.com/courses/498126/pages/ml4t-development-environment-setup>) on Canvas for all the details and updates.

Grades

Your performance in this class is assessed through a combination of different assignments, each designed to measure various aspects of your learning:

1. **Projects:** You will complete eight hands-on projects that form the backbone of your grade. These are your opportunities to apply what you've learned and demonstrate your problem-solving skills.
2. **Exams:** Two comprehensive exams will challenge your understanding of the course material and your ability to apply theoretical concepts.
3. **Course Content Quizzes:** Regular quizzes help reinforce your learning and give you immediate feedback on how well you're grasping the content.
4. **Course Surveys:** Four surveys will be conducted to gather your input on the course, which also contribute to your final grade.

Final grades are not just numbers; they reflect your hard work and progress. They will be calculated based on the weighted average of all graded components. Here's how the final letter grade breaks down:

- 90 or above secures an A
- 80 to 89 earns a B
- 70 to 79 gets you a C
- 60 to 69 results in a D
- Below 60 leads to an F

Remember, the grade scale here is absolute, not curved. On the one hand, this means that everyone in class has the opportunity to aim high and achieve "A"s. On the other hand, it means that a score of 89.9999%, for example, is a B. Georgia Tech does not use plus and minus grade.

Regarding the return of grades, our official policy is to release them in two main batches—one before the Institute's Drop Date, and the final batch at the end of the term. We understand the importance of timely feedback, so our hope is to be able to get grades back to you on a rolling basis,

Course Deliverables

Assignments: 71%

In this course, you will complete eight assignments, which together comprise 71% of your final grade. These assignments vary in scope and difficulty, and as such, they are weighted differently to reflect their complexity and the effort required.

The assignments are designed as a mix of programming tasks and comprehensive projects that include both programming and written reports. This structure is intended to not only test your technical abilities but also to enhance your skills in analyzing, articulating, and presenting your findings in a structured academic format. Each assignment will challenge you to apply the concepts and techniques discussed in readings and lectures to real-world trading scenarios, helping you to solidify your understanding and refine your skills in practical applications.

- **Project 1** (<https://gatech.instructure.com/courses/498126/assignments/2333578>), 3%: Martingale
- **Project 2** (<https://gatech.instructure.com/courses/498126/assignments/2333582>), 3%: Optimize Something
- **Project 3** (<https://gatech.instructure.com/courses/498126/assignments/2333586>), 15%: Assess Learners
- **Project 4** (<https://gatech.instructure.com/courses/498126/assignments/2333588>), 5%: Defeat Learners
- **Project 5** (<https://gatech.instructure.com/courses/498126/assignments/2333590>), 8%: Marketsim
- **Project 6** (<https://gatech.instructure.com/courses/498126/assignments/2333592>), 7%: Indicator Evaluation
- **Project 7** (<https://gatech.instructure.com/courses/498126/assignments/2333594>), 10%: Qlearning Robot
- **Project 8** (<https://gatech.instructure.com/courses/498126/assignments/2333598>), 20%: Strategy Evaluation

Exams: 25%

You'll have two exams in this course, and each one will count for 12.5% of your overall grade.

The exams will be administered online using Canvas and Honorlock. You'll have a one-week window to complete each exam, starting one week before the due date. Make sure to schedule your exam within this period, as early or late submissions won't be accepted.

Everything we've covered up to the exam—including readings, any papers, YouTube videos, and Ed Lessons videos listed in the syllabus—is fair game for the exams. Be sure to review all these materials to prepare thoroughly and give yourself the best chance to excel.

Course Content Quizzes: 2%

Each week, you'll be greeted with a quiz designed to keep you sharp and engaged with the course material. During the Summer term, expect about 10 quizzes, while the Fall and Spring terms will feature around 12. These quizzes will touch on everything from the readings and lectures to the finer points of your active projects.

Here's the deal with quizzes:

- **They're quick:** You'll only have to tackle a few multiple-choice or multi-select questions.
- **They're convenient:** You'll find them on Canvas, ready to go whenever you are within the week they're assigned.
- **They're a little different from exams:** While exams are all about multi-select questions, quizzes will mix it up with both multiple-choice and multi-select options.
- **They're uniquely scored:** Canvas has its own way of grading quizzes, which is different from how we'll score your exams.

A heads-up on quiz etiquette: Please keep quiz content between you and Canvas. That means no sharing questions on Ed Discussion, Slack, Discord, or other chat platforms. It's part of ensuring everyone gets a fair shot at the material.

Quizzes open up each Monday and need to be completed by Sunday night at 11:59 pm AOE. It's a good rhythm—you start the week with new material and end with a quiz to cap it off. Just remember, there are no early birds or latecomers in quiz land—everyone gets the same window to complete them.

Course Surveys: 2%

Think of course surveys as your space to be heard — and they're worth 2% of your overall grade. However, as there are no right or wrong answers, completing all four surveys is an easy way to earn 2% of your overall course grade.

Schedule

[Required readings will reference selected Chapters, not entire Parts or Sections of books.](#)

(*) denotes optional or supplemental material

Notes on Resources

- Papers are available via the "[Videos, Textbooks, and Other Resources](https://gatech.instructure.com/courses/498126/pages/video-lessons-textbooks-and-other-resources) (<https://gatech.instructure.com/courses/498126/pages/video-lessons-textbooks-and-other-resources>)" page.
- Many videos are found in Ed Lessons
- Additional Videos are found in the Media Gallery in Canvas and are represented by "(M)"
